Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 30, 43-45, 58-64 and 73 are rejected under 35 U.S.C. 102(e) as being anticipated by Yan (U.S. Patent 5,843,172).

Yan discloses a porous medicated stent (30) having plurality of interconnected microholes distributed throughout said stent body substantially uniformly along the entire length of said stent body; the microholes is adapted to promote an organized growth pattern of infiltrating cells, such as endothelial cells as is claimed (Abstract, figure 4, column 1 lines 12-20 and 62-67, column 2 lines 1-46, column 4 lines 12-31, column 5 lines 1-28 and column 6 lines 44-60).

Please note that Yan reads on the newly added limitation “uniformly along... entire” because the limitation as seen by the examiner to be the microholes are distributed along the length on the stent. Furthermore, the term “substantially” does not limit the microholes to be in a specific pattern or order. Therefore, the rejection under 35 U.S.C. 102(e) as being anticipated by Yan is proper.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 74 and 75 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yan (U.S. Patent 5,843,172) in view of Behl (U.S. Patent 5,078,736).

Yan is explained as before. Yan further lacking means for administering a stimulus to the cells growing on the stent.

Behl discloses a stent (10) with the method of implanting into the tubular organ of the subject an implant able stent body and providing a stimulus to the stent body (column 2 lines 38-63, column 3 lines 24-67, column 4 lines 3-6, column 5 lines 1-16 and lines 30-49 and figures 1-3). The advantage of having an external stimuli is to prevent stenosis of the patent's lumen by disrupting tissue growth.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the teaching of Behl to modify the apparatus of Yan to have a means for administering a stimulus to the cells growing on the stent. The motivation for incorporating the feature of Behl into the apparatus of Yan is to prevent stenosis of the patent's lumen by disrupting tissue growth.
